

CAMBOROUGH™ 29

Add efficiency to your operation with this new Camborough sow

Camborough 29 is a hybrid parent gilt designed to produce a large number of full value market pigs sold per lifetime.

Camborough 29's hybrid vigour allows customers to focus on efficient production through:

- More born alive and more pigs weaned
- Durability and longevity
- Reduced carcass variation
- Reduced multiplication costs

Camborough 29 is the ideal gilt for producers who want to lower their cost of production through greater output per gilt introduced into the herd. She is a prolific hybrid that improves lifetime margin per sow.

Camborough 29 is a robust performer with the versatility to adapt to a variety of environments – indoor or outdoor.

Unlike competitor gilts, Camborough 29's superiority arises from combining high levels of productivity with superior progeny growth and carcass characteristics, without compromising on sow longevity.

Advance your herd genetics. To discover if Camborough 29 is the right gilt for you, please contact your local PIC area representative.

Camborough gilts are acknowledged as one of the world's most prolific and genetically improved females, and are the direct result of utilizing PIC's specialised systems for constant genetic improvement:

PICTraq™ is PIC's Global Genetic Information System and the foundation for PIC's genetic improvement programme. It is a purpose-designed genetic database which started recording in 1983 and now has data on over 5.6 million animals. EBVs are updated daily on over one million individual pigs.

PICMate™ is a computer software package based on 'Optimal Contribution Theory', and produces lists for use in the Genetic Nucleus herd. Inputs include the increasingly accurate PICebv™ of each boar and gilt in the herd, the pedigree and family structure of each boar and gilt in the herd and PIC's maximum permissible rate of inbreeding.

PIC

Camborough Family

Camborough gilts are carefully selected for reproductive and robustness traits using sophisticated multivariate BLUP* computer programs and PICMarq™ technology. The grandparent stock, from which the Camborough gilts are derived, are continually improved for the following damline traits:

REPRODUCTIVE TRAITS

- Litter size
- Stillborn
- Piglet survival
- Litter weaning weights
- Teat number

ROBUSTNESS TRAITS

- Pre-weaning mortality
- Nursery pig mortality
- Sow mortality/longevity
- Grower mortality

This means that Camborough replacement gilts always carry the latest genetic improvements, giving PIC customers the optimum in profit potential.

*BLUP = Best Linear Unbiased Prediction of breeding value.
